Service Availability & Requirements

Superloop NBN Home Broadband plans are only available on FTTP/H and in certain NBN enabled areas. Initial qualification checks will need to be performed to determine the availability of the service.

If you require WiFi within your property, you will need an NBN compatible Ethernet WAN (**eWAN**) WiFi router for NBN Fibre-to-the-Premises (**FTTP**)

NBN Service Speeds

The **NBN SPEED TIER** above describes the theoretical maximum speed attainable by the NBN connection at the highest transmission rate of the nbn network made possible by the technology.

For factors that can affect speeds over the NBN network to the premises, you can visit the information at www.superloop.com/speeds-and-performance

Below are factors which can affect the speeds received by your End Device(s) within your home (Local-Area-Network (LAN)):

- Connecting to your router or modem router via WiFi instead of an Ethernet LAN cable
- Performance and configuration of your network equipment (such as routers, switches, WiFi extenders, power-line adapters, or hardware firewalls).
- Quality and condition of any internal wall data cabling currently in-use.
- The number of users simultaneously accessing the local network and/or internet service at any one time.

- The use of VPN or Proxy software installed on your end device(s) or network equipment.

Actual online browsing and streaming speeds can vary based on the performance and location of the content servers you're accessing, the performance and configuration of any third party network equipment, and the performance of any interconnection infrastructure that Superloop does not monitor or maintain.
